

MUHAMMAD ZOHAIB

AI/ML Engineer

Lahore, Pakistan • +92 322 7965573 • [Gmail](#) • [GitHub](#) • [LinkedIn](#)

SUMMARY

AI/ML Engineer with hands-on experience building end-to-end machine learning and deep learning pipelines, from data preprocessing and statistical modeling to deployment. Delivered production-grade forecasting, computer vision, and recommendation systems for clients across 3+ countries and co-authored a peer-reviewed research publication. Proficient in Python, TensorFlow, PyTorch, and Scikit-learn, with strong grounding in statistics, experimentation, and model evaluation. Seeking a Data Science internship to apply rigorous, data-driven problem solving to real world business questions.

CORE SKILLS

- **Languages & Libraries:** Python, SQL, Pandas, NumPy, Matplotlib, Plotly
- **ML/AI:** Machine Learning, Deep Learning, NLP, Recommendation Systems, RAG Pipelines, LLMs
- **Agentic AI:** LangChain, LangGraph, OpenAI API, HuggingFace, Prompt Engineering, Multi-Agent Orchestration
- **Tools & Deployment:** FastAPI, Streamlit, Docker, Git, REST APIs, Jupyter
- **Soft Skills:** Client Communication, Technical Documentation, Problem Solving, Cross functional Collaboration

EXPERIENCE

Freelance AI/ML Engineer & Data Scientist | Fiverr (Remote)

Mar 2025 – Present

- Delivered end-to-end ML and data science solutions for clients across 3+ countries, translating ambiguous business problems into production ready pipelines and measurable outcomes.
- Engineered a deep learning downside-risk forecasting and CVaR portfolio optimization pipeline (LSTM, Transformer, GJR-GARCH, CVXPY) across a 12-asset, 20-year financial dataset, validating results with 17 backtesting metrics and VIX regime-based stress testing.
- Authored technical documentation and usage guides for every deliverable, reducing post-delivery client support requests.

AI/ML Intern | Sygnls, Lahore, Pakistan

Apr 2025 – Jul 2025

- Built and optimized end-to-end ML pipelines — data preprocessing, feature engineering, and model training using Python, Scikit-learn, and TensorFlow in a fast paced startup environment.
- Conducted exploratory data analysis (EDA) on structured datasets, improving data quality and accelerating model training cycles.
- Partnered with product and engineering teams to translate analysis into AI driven product features.

PROJECTS

Deep Learning Risk Forecasting & Portfolio Optimization (PyTorch, TensorFlow, Statsmodels, CVXPY)

- Forecasted downside risk and optimized portfolio allocation under market stress using LSTM, Transformer, and hybrid GARCH-LSTM models on 20+ years of multi-asset financial time-series data. ([GitHub](#))

Recommender System Benchmark: BPR-MF vs. LightGCN (Python, PyTorch, Pandas)

- Benchmarked matrix factorization against a graph neural network recommender on MovieLens-1M, improving Recall@10 by ~20% (0.142 vs. 0.118). ([GitHub](#))

MediDerma-AI: Skin Disease Classifier (TensorFlow, Keras, OpenCV, Scikit-learn)

- Built a CNN-based image classifier diagnosing 5+ skin conditions from patient photos; designed an image augmentation pipeline to improve real world generalization. ([GitHub](#))

EDUCATION

BS, Information Technology

University of Education, Lahore, Pakistan • Expected May 2027

CERTIFICATIONS

- DigiSkills.pk | Freelancing Certification (DSTP2.0 – Batch 04) | June 2023 | ([Certificate](#))
- HEC Cohort 3 | Coursera AI/ML Engineer | ([Certificate](#))
